

Introduction

This alignment summarizes the relationship between the 2001 Ohio Academic Content Standards (Ohio ACS) for Mathematics and the 2010 Common Core State Standards (CCSS) adopted by Ohio on June 7, 2010. The Crosswalk lists all of the kindergarten through high school domains and clusters and their corresponding benchmarks from the 2001 standards. This document is provided to assist curriculum specialists and teachers in reviewing their current curriculum and instruction in preparation for the transition to the CCSS. The CCSS can be found at www.corestandards.org.

The structure and organization of the standards has changed. The frameworks for the 2001 and 2010 sets of standards are not parallel. While there are clear connections between both sets of standards, there also are significant differences.

2001 Academic Content Standards for Mathematics

Standards
 Benchmarks (by grade band)
 Indicators (by grade)

2010 Common Core State Standards for Mathematics

<u>Grades K -8</u>	<u>High School</u>
Grade	Conceptual Category
Domain	Domain
Cluster	Cluster
Standard (Statements)	Standard (Statements)
<i>Each grade also identifies "critical areas" of focus</i>	

This document connects the CCSS clusters and standard statements (2010) with the Ohio benchmarks (2001). **Alignments are not exact.** The intent and level of expectation for each of these sets of standards varies, making it difficult to say that the connections made show full alignment.

Process

A committee of teachers, teacher educators, ESC consultants, and other mathematics professionals were brought together to assist the Ohio Department of Education in the process of identifying the connections between the 2010 CCSS and the 2001 Ohio ACS for Mathematics. This task included aligning the 2001 benchmarks to the 2010 CCSS standard statements, which are grouped by clusters.

Benchmarks may be aligned to one or several of the standard statements within a cluster. Benchmarks identified as prerequisite skills or concepts are not included as connections. Additionally, the number of benchmarks connected to a cluster does not imply any level of alignment or coverage. Finally, we caution users of this crosswalk that alignment of a benchmark to a 2010 cluster does not necessarily imply that 2001 indicators associated with the benchmark align to the same cluster.

Mathematics Academic Content Standards Crosswalk

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

How to Use This Document

The first three columns identify the Conceptual Category, Domain and Cluster from the 2010 Common Core State Standards for Mathematics. The fourth column identifies a corresponding benchmark(s) from 2001 Ohio Academic Content Standards for Mathematics that are aligned to the 2010 CCSS.

Common Core State Standards K – 8			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Number and Quantity	Real Number System	Extend the properties of exponents to rational exponents.	OH.11-12.N.C Apply factorials and exponents, including fractional exponents, to solve practical problems.
		Use properties of rational and irrational numbers.	OH.11-12.P.E Evaluate a mathematical argument and use reasoning and logic to judge its validity.

Reading the Ohio Code used for the benchmarks.

Ohio. Grade Band. Standard. Benchmark

The standards in the benchmark code are identified by the following notation.

- **N. – Number, Number Sense and Operations**
- **M. – Measurement**
- **G. – Geometry and Spatial Sense**
- **A. – Patterns, Functions and Algebra**
- **D. – Data Analysis and Probability**
- **P. – Mathematical Processes**

As mentioned above, the alignment between the two sets of standards is not perfect and should not be used to re-purpose curriculum and instructional materials for teaching the 2010 CCSS. This document should be used to begin the conversation and the analyses of these two sets of standards.

The transition from the current Ohio ACS to the newly adopted CCSS needs to be a thoughtful process involving professional development about the CCSS, local district analysis of what needs to be changed accompanied by the creation and implementation of a sensible plan that gradually moves toward the CCSS by 2014. It is recommended that districts begin this process after the State Board adopts the model curriculum in March 2011.

Mathematics Academic Content Standards Crosswalk

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

Common Core State Standards High School			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Number and Quantity	Real Number System	Extend the properties of exponents to rational exponents.	OH.11-12.N.C Apply factorials and exponents, including fractional exponents, to solve practical problems.
		Use properties of rational and irrational numbers.	OH.11-12.P.E Evaluate a mathematical argument and use reasoning and logic to judge its validity.
	Complex Number System	Reason quantitatively and use units to solve problems.	OH.8-10.M.A Solve increasingly complex non-routine measurement problems and check for reasonableness of results. OH.11-12.M.A Explain differences among accuracy, precision and error, and describe how each of those can affect solutions in measurement situations. OH.11-12.M.B Apply various measurement scales to describe phenomena and solve problems. OH.11-12.M.D Solve problem situations involving derived measurements; e.g., density, acceleration.
		Perform arithmetic operations with complex numbers.	OH.11-12.A.B Use the quadratic formula to solve quadratic equations that have complex roots. OH.11-12.N.E Represent and compute with complex numbers.
		(+) Perform arithmetic operations with complex numbers.	OH.11-12.N.E Represent and compute with complex numbers.
		(+) Represent complex numbers and their operations on the complex plane.	OH.11-12.N.E Represent and compute with complex numbers.
	Vector and Matrix Quantities	Use complex numbers in polynomial identities and equations.	OH.11-12.A.B Use the quadratic formula to solve quadratic equations that have complex roots.
		(+) Represent and model with vector quantities.	OH.11-12.A.D Apply algebraic methods to represent and generalize problem situations involving vectors and matrices.
		(+) Perform operations on vectors.	OH.11-12.N.D Demonstrate fluency in operations with real numbers, vectors and matrices, using mental computation or paper and pencil calculations for simple cases and technology for more complicated cases.
		(+) Perform operations on matrices and use matrices in applications.	OH.11-12.A.D Apply algebraic methods to represent and generalize problem situations involving vectors and matrices. OH.11-12.G.B Represent transformations within a coordinate system using vectors and matrices. OH.11-12.N.A Demonstrate that vectors and matrices are systems having some of the same properties of the real number system. OH.11-12.N.B Develop an understanding of properties of and representations for addition and multiplication of vectors and matrices. OH.11-12.N.D Demonstrate fluency in operations with real numbers, vectors and matrices, using mental computation or paper and pencil calculations for simple cases and technology for more complicated cases.

Mathematics Academic Content Standards Crosswalk

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

Common Core State Standards High School			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Algebra	Seeing Structure in Expressions	Interpret the structure of expressions	OH.11-12.A.C Use recursive functions to model and solve problems; e.g., home mortgages, annuities.
		Write expressions in equivalent forms to solve problems.	OH.8-10.A.G Solve quadratic equations with real roots by graphing, formula and factoring. OH.11-12.A.C Use recursive functions to model and solve problems; e.g., home mortgages, annuities.
	Arithmetic with Polynomials and Rational Expressions	Perform arithmetic operations on polynomials.	OH.8-10.N.C Apply properties of operations and the real number system, and justify when they hold for a set of numbers.
		Understand the relationship between zeros and factors of polynomials.	OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
		(+) Use polynomial identities to solve problems.	OH.11-12.N.C Apply factorials and exponents, including fractional exponents, to solve practical problems. OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
		Rewrite rational expressions	No Aligned Benchmarks
	Creating Equations	Create equations that describe numbers or relationship.	OH.8-10.A.D Use algebraic representations, such as tables, graphs, expressions, functions and inequalities, to model and solve problem situations.
	Reasoning with Equations and Inequalities	Understand solving equations as a process of reasoning and explain the reasoning.	OH.5-7.A.I Explain how inverse operations are used to solve linear equations. OH.8-10.A.F Solve and graph linear equations and inequalities.
		Solve equations and inequalities in one variable.	OH.5-7.A.H Solve linear equations and inequalities symbolically, graphically and numerically. OH.8-10.A.F Solve and graph linear equations and inequalities. OH.8-10.A.G Solve quadratic equations with real roots by graphing, formula and factoring. OH.11-12.A.B Use the quadratic formula to solve quadratic equations that have complex roots.
		Solve systems of equations.	OH.8-10.A.H Solve systems of linear equations involving two variables graphically and symbolically.
		(+) Solve systems of equations.	OH.11-12.A.D Apply algebraic methods to represent and generalize problem situations involving vectors and matrices.
		Represent and solve equations and inequalities graphically.	OH.5-7.A.F Use representations, such as tables, graphs and equations, to model situations and to solve problems, especially those that involve linear relationships. OH.8-10.A.C Translate information from one representation (words, table, graph or equation) to another representation of a relation or function. OH.8-10.A.F Solve and graph linear equations and inequalities. OH.8-10.A.H Solve systems of linear equations involving two variables graphically and symbolically.

Mathematics Academic Content Standards Crosswalk

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

Common Core State Standards High School			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Functions	Interpreting Functions	Understand the concept of a function and use function notation.	OH.8-10.A.A Generalize and explain patterns and sequences in order to find the next term and the nth term. OH.11-12.A.C Use recursive functions to model and solve problems; e.g., home mortgages, annuities.
		Interpret functions that arise in applications in terms of the context.	OH.8-10.A.C Translate information from one representation (words, table, graph or equation) to another representation of a relation or function. OH.8-10.A.E Analyze and compare functions and their graphs using attributes, such as rates of change, intercepts and zeros. OH.8-10.A.J Describe and interpret rates of change from graphical and numerical data. OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
		Analyze functions using different representations.	OH.5-7.A.K Graph linear equations and inequalities. OH.8-10.A.B Identify and classify functions as linear or nonlinear, and contrast their properties using tables, graphs or equations. OH.8-10.A.C Translate information from one representation (words, table, graph or equation) to another representation of a relation or function. OH.8-10.A.E Analyze and compare functions and their graphs using attributes, such as rates of change, intercepts and zeros. OH.8-10.A.F Solve and graph linear equations and inequalities. OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
	Building Functions	Build a function that models a relationship between two quantities.	OH.8-10.A.A Generalize and explain patterns and sequences in order to find the next term and the nth term. OH.11-12.A.C Use recursive functions to model and solve problems; e.g., home mortgages, annuities.
		Build new functions from existing functions.	OH.8-10.A.E Analyze and compare functions and their graphs using attributes, such as rates of change, intercepts and zeros.
	Linear, Quadratic, and Exponential Models	Construct and compare linear, quadratic, and exponential models and solve problems.	OH.8-10.A.D Use algebraic representations, such as tables, graphs, expressions, functions and inequalities, to model and solve problem situations.
		Interpret expressions for functions in terms of the situation they model	No Aligned Benchmarks
	Trigonometric Functions	(+) Extend the domain of trigonometric functions using the unit circle.	OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
		Model periodic phenomena with trigonometric functions.	OH.11-12.A.A Analyze functions by investigating rates of change, intercepts, zeros, asymptotes, and local and global behavior.
		(+) Prove and apply trigonometric identities.	OH.11-12.G.A Use trigonometric relationships to verify and determine solutions in problem situations.

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

Common Core State Standards High School			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Geometry	Congruence	Experiment with transformations in the plane	OH.5-7.G.H Predict and describe results (size, position, orientation) of transformations of two-dimensional figures. OH.8-10.G.A Formally define geometric figures. OH.8-10.G.F Represent and model transformations in a coordinate plane and describe the results.
		Understand congruence in terms of rigid motions	OH.8-10.G.H Establish the validity of conjectures about geometric objects, their properties and relationships by counter-example, inductive and deductive reasoning, and critiquing arguments made by others.
		Prove geometric theorems	OH.8-10.G.C Recognize and apply angle relationships in situations involving intersecting lines, perpendicular lines and parallel lines. OH.8-10.G.G Prove or disprove conjectures and solve problems involving two- and three-dimensional objects represented within a coordinate system. OH.8-10.G.H Establish the validity of conjectures about geometric objects, their properties and relationships by counter-example, inductive and deductive reasoning, and critiquing arguments made by others.
		Make geometric constructions.	OH.8-10.G.E Draw and construct representations of two- and three-dimensional geometric objects using a variety of tools, such as straightedge, compass and technology.
	Similarity, Right Triangles, and Trigonometry	Understand similarity in terms of similarity transformations	OH.5-7.G.H Predict and describe results (size, position, orientation) of transformations of two-dimensional figures. OH.8-10.G.B Describe and apply the properties of similar and congruent figures; and justify conjectures involving similarity and congruence.
		Prove theorems involving similarity	OH.5-7.G.F Describe and use the concepts of congruence, similarity and symmetry to solve problems. OH.5-7.G.J Apply properties of equality and proportionality to solve problems involving congruent or similar figures; e.g., create a scale drawing. OH.8-10.G.B Describe and apply the properties of similar and congruent figures; and justify conjectures involving similarity and congruence. OH.8-10.G.H Establish the validity of conjectures about geometric objects, their properties and relationships by counter-example, inductive and deductive reasoning, and critiquing arguments made by others.
		Define trigonometric ratios and solve problems involving right triangles	OH.8-10.G.I Use right triangle trigonometric relationships to determine lengths and angle measures. OH.8-10.M.D Use proportional reasoning and apply indirect measurement techniques, including right triangle trigonometry and properties of similar triangles, to solve problems involving measurements and rates. OH.11-12.G.A Use trigonometric relationships to verify and determine solutions in problem situations.
		(+) Apply trigonometry to general triangles	OH.11-12.G.A Use trigonometric relationships to verify and determine solutions in problem situations.

Comparison of the Common Core State Standards and the 2001 Academic Content Standards for Mathematics

Common Core State Standards High School			Ohio – 2001 Academic Content Standards
Conceptual Category	Domain	Cluster	Benchmark
Geometry	Modeling with Geometry	Apply geometric concepts in modeling situations.	OH.11-12.M.D Solve problem situations involving derived measurements; e.g., density, acceleration. OH.11-12.P.J Apply mathematical modeling to workplace and consumer situations, including problem formulation, identification of a mathematical model, interpretation of solution within the model, and validation to original problem situation.
		Summarize, represent, and interpret data on a single count or measurement variable.	OH.5-7.D.A Read, create and use line graphs, histograms, circle graphs, box-and-whisker plots, stem-and-leaf plots, and other representations when appropriate. OH.5-7.D.F Determine and use the range, mean, median and mode to analyze and compare data, and explain what each indicates about the data. OH.8-10.D.B Evaluate different graphical representations of the same data to determine which is the most appropriate representation for an identified purpose. OH.8-10.D.D Find, use and interpret measures of center and spread, such as mean and quartiles, and use those measures to compare and draw conclusions about sets of data.
Statistics and Probability	Interpreting Categorical and Quantitative Data	Summarize, represent, and interpret data on two categorical and quantitative variables.	OH.8-10.D.A Create, interpret and use graphical displays and statistical measures to describe data; e.g., box-and-whisker plots, histograms, scatterplots, measures of center and variability.
		Understand and evaluate random processes underlying statistical experiments.	OH.8-10.D.G Describe sampling methods and analyze the effects of method chosen on how well the resulting sample represents the population.
	Making Inferences and Justifying Conclusions	Make inferences and justify conclusions from sample surveys, experiments, and observational studies.	OH.8-10.D.E Evaluate the validity of claims and predictions that are based on data by examining the appropriateness of the data collection and analysis. OH.8-10.D.F Construct convincing arguments based on analysis of data and interpretation of graphs.
		Conditional Probability and the Rules of Probability	Understand independence and conditional probability and use them to interpret data.
	Use the rules of probability to compute probabilities of compound events in a uniform probability model.		OH.8-10.D.J Compute probabilities of compound events, independent events, and simple dependent events.
	(+) Use the rules of probability to compute probabilities of compound events in a uniform probability model.		OH.8-10.D.H Use counting techniques, such as permutations and combinations, to determine the total number of options and possible outcomes. OH.8-10.D.J Compute probabilities of compound events, independent events, and simple dependent events.
	Using Probability to Make Decisions	(+) Calculate expected values and use them to solve problems.	OH.8-10.D.K Make predictions based on theoretical probabilities and experimental results. OH.11-12.D.A Create and analyze tabular and graphical displays of data using appropriate tools, including spreadsheets and graphing calculators.
		(+) Use probability to evaluate outcomes of decisions.	OH.8-10.D.I Design an experiment to test a theoretical probability, and record and explain results.
